

Cable System Section Highlights

The construction of the Swiss power distribution system already dates back quite a few years. Many substations have been in service for over 30 years and are gradually approaching the end of their working lives. As a result of the increased importance attached to security of energy supply in recent years, work has been steadily pressing ahead with the renewal process. PFISTERER IXOSIL AG, Altdorf, has succeeded in winning a number of these cable renewal projects.
