

## **PFISTERER earthing terminals: The safety lies in the detail.**

**Specialists work at dizzying heights when earthing high-voltage power lines. PFISTERER makes this job a lot easier with an intriguingly detailed solution.**

Thanks to parallel-routed clamping jaws, the Para-Phase P10 connecting clamp can be fitted from above superbly. For greater safety, also when fitting at inclined angles, this new variant is also equipped with an arrester bracket: When tightening the clamping bolt, it closes around the line and the clamp is then secured in a non-slip position.

For safe use of your functional thrust element on painted masts, PFISTERER includes specialist milled earthing clamps in its product range: The annular cutting edge and tip of these are hardened, thereby ensuring that they can cut through the paint coating and establish perfect contacts.
