DOC
Self-supporting dry outdoor composite termination up to 170 kV

www.pfisterer.com
Completely dry and safety tested

Electricity networks have to be cost-effective and safe. For a hundred years now, PFISTERER’s technology and quality have fulfilled both of these requirements.

Dry PFISTERER outdoor cable terminations have been used worldwide for decades in substations and on high-voltage transmission towers. They connect cable systems to overhead lines and busbars with long-term reliability. That pays dividends. For time-critical installation projects with the future in mind, PFISTERER now offers DOC – the first dry, self-supporting termination.

**No oil, gas or gel**
The insulation is made from silicone, which protects the environment as no insulating oils are used.

**Tested safety**
Proven and innovative technologies for the future, made by PFISTERER. Every termination is fully and individually tested before it leaves our factory.

**Installed in minutes**
Ready to use on site: the preassembled DOC termination is tested and shipped as a complete unit. That means the hollow insulator, stress grading device and base plate already form a complete product when delivered. The termination is simply pulled on. It is no longer necessary to bond individual insulator sections.
SICON

Extremely reliable connection with patented SICON stepless shear bolt technology.

Silicone

The stress grading device is implemented exclusively with silicone. The product’s longevity is proven.

SMART clamp

The SMART clamp simplifies and standardises screening work. It also creates a reliable contact between the screen and an earthing point.

Benefits

- Whole termination routine tested (IEC 60840 clause 9)
- Proven material
- Proven technology
- No liquid handling on site
- Fast and reliable installation
- Integrated base plate
- Fixed earthing point for simpler screen handling
- Maintenance-free

In 1921, Karl Pfisterer founded his factory in Stuttgart for special electrical products with the aim of improving the world of power transmission. The PFISTERER Group has pursued this goal of quality and technological leadership for more than 100 years. Today, PFISTERER is one of the world’s leading specialists and system suppliers for energy infrastructure – with a complete range of cable accessories, overhead line technology and components along the entire transmission chain from power generation to consumption. With state-of-the-art manufacturing processes and 1,200 employees at 18 international locations, PFISTERER not only connects the power grids of today and tomorrow, but also makes an important contribution to a sustainable and secure energy supply.
