ISICOMPACT
Cable tap connector for 1 kV low-voltage powergrids

www.pfisterer.com
Practical installation, good occupational safety and high levels of operational reliability are fundamental criteria for home power connections. ISICOMPACT by PFISTERER – the inventor of multi-conductor cable branch technology – is today’s state-of-the-art. This enhancement of our “compact tap connector” (also known as the SCK) has been modified in line with current work standards. And with great success. These days, the ISICOMPACT connector is a major player in low-voltage powergrids.

**Six screws become ONE**

ISICOMPACT reliably creates a branch connection from the supply cable to the end customer with just one screw. This simplifies and speeds up installation. Where as conventional “clamping rings” have at least six screws, one or more of which are usually poorly accessible, the single screw on the ISICOMPACT can be placed on the cable to suit conditions, and conveniently tightened from above or from the side.

**Simple & safe installation**

Tightening the screw establishes all conductor contacts reliably and safely to form the cable branch. Insulation does not have to be removed from the conductor; contacts are established by piercing the insulation. Spring pressure plates on both sides of the clamp ensure permanent contact force. The design and installation sequence ensure protection against contact with live parts throughout all work steps.

**Live line working**

Providing shock-proof protection against electrical hazards, ISICOMPACT is designed for live line working. The “green” version ISICOMPACT plus is the only cable tap connector approved by employer’s liability insurance association BG ETEM for live line work without additional PPE. It meets the strict requirements of DGUV Information 203-031 (formerly BGI 862).

**High flexibility**

Compared to conventional cable tap connectors, ISICOMPACT offers significantly larger clamping ranges and high flexibility in use. Altogether there are two standard sizes and seven variants. ISICOMPACT multi combines the S, M and 3 1/2 variants in one product. As a result, electricians are equipped for all eventualities. At the same time, the smaller number of variants reduces the risk of using the wrong type and cuts inventory costs.
Unique shear-off technology

ISICOMPACT features a specially developed shear nut which performs two tasks during fitting. It defines the installation end-point and minimises the clamp’s dimensions. Once the optimal contact force is reached, the shear nut operates and the protruding section of the screw breaks away burr-free. Subsequently, ISICOMPACT fits into all commercially available cast resin joints.

Benefits
- No stripping of conductors
- Insulation does not have to be removed from the conductor
- Shock-proof protection against electrical hazards
- One-Screw solution with defined shear torque
- Consistent operational reliability, tested to DIN VDE 0220 part 3
- Reduced range of variants due to large area of application
- Ideal for live line work

ISICOMPACT in Numbers
- Main conductor cross-section: 25-240 mm²
- Branch conductor cross-section: 6-185 mm²
- Voltage: up to 1 kV
Single-screw system
- 4-conductor branch by tightening one screw
- Screw connection can be placed in any position
Quick and simple installation

Piercing contact technique
- No stripping of the conductors
- Shock-proof protection against live conductors
Fast installation – good occupational safety

Cross-wedges
- Penetrate through insulation
- Support of the main conductors
Reliable branch connection over the full service life

Functional product design
- Touch-safe at every installation step
- Stepless adjustment to conductor cross-sections
- Branch conductors are simply placed into the clamp
Good occupational safety – simple installation

Universal application
- Large cross-section ranges
- For all types of conductor
- For aluminium and copper conductors
Fewer different variants and low inventory costs
Shear-off nut
- Defined shear-off torque
- Optimal contact forces
- Screw breakaway signals end of completion of the installation
  Simple installation

Spring elements
- Constant contact quality
- Compensation of mechanical settling losses
  Reliable contacting over the full service life

Protection ribs
- Prevent premature penetration of contacts into main line
- Breaks during tightening of clamp
- Break if clamp is distorted
  Shock-proof protection throughout all installation steps for live line work

Insulating wall with inspection openings
- Protection against touching the branch line
- Enables checking of conductor position
  Good occupational safety for live line work

Installation using standard tools
- Insulated tools in accordance with EN 60900
- Requires 13 mm or 17 mm wrench
- No torque wrench
  Simple installation
Everything from a single source

Clamping ring and cast resin joints from the inventor of multi-conductor cable branch technology.

As a contact technology specialist and solution-oriented system provider, PFISTERER offers a wide selection of cast resin joints to complement the ISICOMPACT connection system, as well as complete matching sets comprising a cast resin joint and the cable tap connector. Our proven two-component cast resins with excellent flow characteristics are available in tins or in a practical two-chamber bag.

Joint sets with ISICOMPACT

* For cables with up to 4 control conductors
The PFISTERER Group is amongst the world’s leading specialist equipment and system suppliers in the energy infrastructure industry. Around 2,100 employees develop, produce and distribute components and complete solutions for the particularly sensitive interfaces in modern energy networks. With a complete range of products and services, the PFISTERER Group provides customised solutions for the complete transmission chain from low and medium to high and ultra-high voltage. Everything from a single source. Worldwide.
